Monthly usage: 445 kWh

Current rates as of April 1, 2024

This table compares electricity costs for an average residential customer in the MCE/PG&E service area with an average monthly usage of 445 kilowatt-hours (kWh). This is based on a representative 12-month billing history for all customers on ETOUC rate schedules for PG&E's and MCE's published rates as of April 1, 2024.

Generation Rate is the cost of creating electricity to power your home. The generation rate varies based on your energy provider and the resources included in your energy provider's generation supply.

PG&E Delivery Rate is a charge assessed by PG&E to deliver electricity to your home. The PG&E delivery rate depends on your electricity usage, but is charged equally to both MCE and PG&E customers.

PG&E PCIA/FF The PCIA is a charge to ensure that both PG&E customers and those who have left PG&E service to purchase electricity from other providers pay the above market costs for generation resources that were procured by PG&E on their behalf. "Above market" refers to expenditures for electric generation resources that cannot be fully recovered through sales of these resources at current market prices. PG&E acts as a collection agent for the FF surcharge, which is levied by the California Public Utilities Commission on behalf of cities and counties in PG&E's service territory for all customers. PG&E bundled customers pay the PCIA and FF fees associated with the most currently available vintage year. PG&E charges MCE customers the PCIA and FF fees based on the year they transitioned to MCE service. Visit [mceCleanEnergy.org/rates](https://mcecleanenergy.org/rates) for more information.
